PREFACE

Chambers 21st Century Dictionary looks at the English language from a fresh perspective. The needs of the reader are always paramount, and this will be immediately apparent on comparing it with any other dictionary. Drawn from the unique Chambers database of language and reference materials, this new dictionary provides in one volume an exceptional range of information about English and how to use it.

In this dictionary, we have tried to make the information easy to find. Items are arranged as far as possible in separate articles. The user should therefore normally look for an item as a headword in its own right. This includes complex items such as **backfire**, **elder statesman**, **ghetto-blaster** and **the man in the street**.

Very few defined items are buried or 'nested' inside others, except for idioms (such as **on the make**) and phrasal verbs (such as **make up**), which are normally nested within the entry for the first principal word, in both these cases at **make**. Derivative words often appear as entries in their own right (eg **occasional**), but when they are straightforward they may be nested (eg **palindromic**), and where their meaning is obvious, they may also be left undefined (eg **bitterness**).

Guidance on pronunciation is given in the International Phonetic Alphabet, using a broad phonemic transcription of British English (ie a systematic representation of the pronunciation of British English speakers as a whole, not that of any individual speaker). An explanation of the symbols used is supplied at the foot of the dictionary pages in two separate sets on consecutive page openings. These cover first, the basic sounds of English, and second, common sounds in foreign words used in English.

One of the principal aims of this book is to help the readers to use English more confidently and effectively, and many of the special features of the dictionary have been designed with this in mind. For example, the fact that we give the past tense and present participle for base forms of all verbs means that readers should never have difficulty spelling these forms. In addition the Usage Panels give further information on aspects of English where there is frequent uncertainty, and provide practical unfussy help in dealing with such matters. They often give

advice, too, on matters of style, eg by suggesting Plain English alternatives to over-pompous or stuffy word-choices.

The additional Information Panels and Tables are designed to draw together strands of information normally scattered throughout the alphabetical text: for example, French words and phrases used in English or the codewords used for letters of the alphabet in radio communication. These enable whole areas of information to be identified and explored together, a facility normally denied to the user of dictionaries.

A major challenge in the compilation of any English dictionary lies in the need to explain how words are used in conjunction with other words; after all, we speak and write phrases and sentences, and meanings emerge from the interaction of words rather than merely from the individual words themselves. Chambers dictionaries are justly famous for their excellence in exemplifying and explaining the idiomatic aspects of language. In this dictionary, we go still further in this process, and include phrasal verbs in this generous treatment, by explaining idioms and phrases in their typical surroundings (or *collocation*). This will be especially noticeable in highly functional and productive words such as *get* and *turn*, which often have little meaning in themselves and derive their meaning from the words that accompany them. No other dictionary for native speakers of English attempts this on such a scale.

We have made every effort to include as much information as possible that will be immediately useful to users from a wide range of ages, and we have paid particular attention to the vocabulary of modern life and culture. However any reference book, no matter what its size, can only provide a selection from a vast number of items available for consideration. There are thought to be over 500 000 words and wordgroups on record in English. The compiler's art lies in making a judicious selection, but it can be only a selection, and no two compilers will make the same choices. The publishers will therefore be pleased to receive suggestions for inclusion in future editions.

Thanks are due to many individuals and institutions for information and advice, and especially Compulexis Ltd, Charlton-on-Otmoor, Oxford, and the Centre for Speech Technology Research, University of Edinburgh, for their help in the preliminary stages of this book. We believe that the text presented here will find a permanent place as a standard source of information for family and general reference.

A BRIEF GUIDE TO THE DICTIONARY

We **spell out the past tense and present participle of all verbs** in full.

We give generous examples of the **idioms** in which a headword is used, introducing each with a ●.

Phrasal verbs are given on their own in a tinted box after the main part of the entry, each preceded by ■.

Some entries have additional **alternative headwords**. These are given in the same typeface as the headword, and are preceded by 'and'. For variant spellings, see note at **coomb** below.

Help with pronunciation is given for most multi-syllable words except as explained below at **cooking apple**.

Geographical labels are given where a meaning or form is restricted geographically.

Etymologies, introduced by ⊙, give date of first use in English, followed by the source of the word or other interesting information about its origin.

Pronunciation help is not given for unambiguous monosyllables, obvious derivatives, or compounds whose parts are found elsewhere in the dictionary or are themselves unambiguous.

Usage examples are given, in a distinctive typeface, to illustrate the meanings. Each is preceded by □.

Appropriate contexts of use are given for some meanings. This is an example illustrating the context of an adjective. Compare note at **coomb** below.

Straightforward derivatives are nested within their base entries either with or without a definition. Compare note at **faulty** opposite.

Parts of speech are marked with traditional labels, mostly in full, eg *noun*, *verb*, *adverb*. Some of the longer labels are given as abbreviations, eg *adj*, *conj*. In addition main parts of speech within an entry are picked out by being preceded by the symbol ⊳.

We **spell out the plural of nouns** where there could be any problem.

Main entry **cross-references** are given for nested material which would be alphabetically more than five entries removed from the entry in which it is nested.

Variant spellings are given in a different typeface from the headword, and are preceded by 'or'. For alternative headwords, see note at **cookery book** above.

We give words as **cross-references** (in the special cross-reference typeface) within other definitions to alert readers to useful further information at the other entry.

Help with pronunciation is given for monosyllables where there might be any ambiguity or uncertainty. Compare note at **cooking apple**.

Subject labels are given where a meaning or form is used within a specific area of knowledge or sphere of reference.

We regard it as normal for verbs to be transitive (ie have an object), so **we only mark verbs when they are used intransitively**.

Appropriate contexts of use are given for some definitions. This is another example illustrating the context of an adjective.

Compounds are given as separate entries from their base words.

We **spell out the comparative and superlative of adjectives** where there could be a problem.

Many **derivatives** are given as separate entries from their base words (as here **faulty** is a derivative of **fault**.) This is done when they are important words in their own right, eg with many meanings and perhaps further derivatives based on them (as here **faultily** and **faultiness**). Compare **coolly** under **cool**.

We give **extra help with pronunciation** for parts of words other than their base forms where this is necessary, eg as here where their plural may be difficult, or sometimes for their different parts of speech, eg **record** is pronounced differently as a noun and as a verb.

We give **headwords in italics** if they normally appear in italics in print, eg especially foreign words which are not neutralized in English.

For **any foreign words which are not common in English** we normally give their pronunciation in their own language, and label the pronunciation as eg *French*. For more information on this see the Usage Panels in the dictionary on the Pronunciation of French, German, Latin and Spanish in English.

Foreign words which are common in English we give as ordinary headwords (ie no italics) and also with neutralized English pronunciations, eg using English vowel sounds rather than those of the original language.

When a particular form or variant of the headword (commonly its plural) is used in some but not all of its senses the **form is given in brackets** before the relevant definition. The principal exception is compound nouns which become hyphenated when they are used as adjectives. This is the norm, and also extremely common, so we do not give the form in brackets, but merely give an example of it in use. So eg ***a dead end***, but ***a dead-end job***.

Register labels pinpoint stylistic level or degree of formality.

ABBREVIATIONS USED IN THE DICTIONARY

In the interests of clarity, editorial abbreviations have been kept to a minimum. When they are used, this is either to save space, where this can be done without distracting the user (eg *adjective* is shortened to *adj*), or to give a special status to the information which would not be conveyed by ordinary prose (eg 11c used to represent 'eleventh century'). Most of the abbreviations are in the subject labels.
